

Before irrigation, manure liquids treated with BioPacks will:

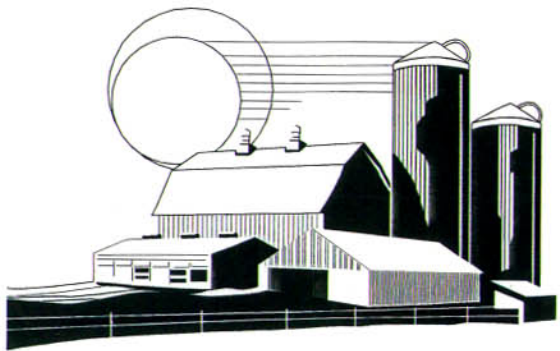

Liquefy Waste Solids For Easier Liquid Manure Pumping When Spraying, Flooding or Hauling

Stabilize Waste Nutrients For Effective Odor Control and Enhanced Crop Production

Enable Suspended Manure Solids To Penetrate Soil Surface Quickly and Allow Field To Dry Out Fast

Make BioPacks a Part of Your EPA Large Confined Animal Feeding Operation (CAFO) Manure Management Plan

SELF-DISSOLVING

BioPacks

For Liquid Manure Storage Systems

One Pack Per 100 Cows Per Week*

Concentrated Bacterial Cultures

Self-dissolving BioPacks biologically prevents odor formation while accelerating the waste digestion process in manure lagoons, pits, ponds and tanks.

At a concentration of 5 billion per gram, each 4oz water-soluble BioPack contains 500 billion beneficial bacteria. Working in conjunction with the existing bacteria in the manure, BioPacks increases the efficiency of the degradation process. Bubbling, foaming and churning in the manure liquids will be self evident within a few weeks after starting treatment. BioPacks is not magic, it's biology at work.

Use just One Pack every week to treat the manure from 100 Cows.

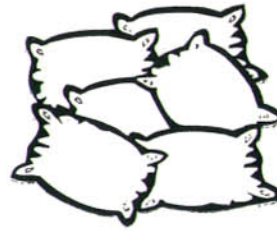

**Penny
Per Cow
Per Day**

Application is simple. Throw packs directly into waste containment structure or drop into waste stream that flows to it. As long as you have cows and those cows are producing manure, BioPacks must be applied EVERY WEEK for optimum performance.

Storage Systems**

Concentrated Bacterial Cultures

Biologically Prevents Odor Formation While Accelerating Waste Digestion Process in Manure Lagoons, Pits, Ponds & Tanks

Faster Agitation • Easier Pumping

Shock Treatment - Once

4 Packs Per 100 Cows
4 Packs Per 200 Heifers
4 Packs Per 400 Calves

Maintenance Treatment - Weekly

1 Pack Per 100 Cows
1 Pack Per 200 Heifers
1 Pack Per 400 Calves

Just Toss Them In!

100% bacterial culture on cereal bran carrier
with micronutrients and biostimulants
